Radiology goes gothic! A barium enema might be for some people not the most eye-pleasing radiological study. However - it is all in the eye of the beholder! The “Gothic Works” art collection demonstrates a nice transformation of practical radiological work into eye-pleasing art. X-ray films from barium enemas as well as teeth X-rays are combined with glass, steel and lead to create a touch of gothic renaissance. Displayed is “Terpsichore”, one of the gothic art pieces from the “9 Muses” collections. (Left: entire window; right: magnified view)

Terpsichore, collection 9 Muses (2001-2002)
Dimensions: 200 x 80 cm; made of steel, X-rays, lead, glass
